[Plant Name & Number]	05-08-2015	On farm welfare	Red Meat: Cattle	Welfare on farm	3	Other	One bovine [ID Number] with CALF AT PMI measuring 88cm	APHA-Animal Health Office informed
[Plant Name & Number]	05-08-2015	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Injured animals	Cow walking on 3 legs transported to the Abattoir	APHA-Animal Health Office informed
[Plant Name & Number]	05-08-2015	Post-mortem findings	Red Meat: Cattle	Post-mortem findings	4	Other	Animal found to be in high gestation period.	TS-Trading Standards informed
[Plant Name & Number]	07-08-2015	On farm welfare	Red Meat: Pigs	Welfare on farm	3	Other	Emaciation and other conditions observed at PMI incl 1DOA with estimated time of death prior to the actual loading	APHA-Animal Health Office informed
[Plant Name & Number]	10-08-2015	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	Fully developed calf	TS-Trading Standards informed
[Plant Name & Number]	10-08-2015	Lairage operation	Red Meat: Sheep	Provision of bedding	3	Insufficient bedding		ENF verbal advice

[Plant Name & Number]	10-08-2015	On farm welfare	Red Meat: Pigs	Welfare on farm	4	Other	Combination of conditions - poor health status/wound and tail bite APHA response :SVI inspected all livestock on 25/08/2015. Well run business and at good standards applied. Business is focused mainly on breeding and providing gilts to different farms. a small proportion goes for growing and finishing on farm (~300 finishing pigs from a total of over ~2600).The in question batch has been indeed one with issues including signs of tail bite vice. [Name] is aware of the existing problems and the management appied includes isolation of individuals which show signs of this behaviour, treat infections if applicable and local antiseptic (all medicine records reflected this). If in a week time pigs don.t show signs of improvement they are killed on farm. Regarding the pig which presented a laceration on the back - pig has been treated for that but the tail (due to it's length) maintained the wound open due to constant irritation. [Name] never faced before issues with tail biting and he's now considering tail docking as a measure to stop recurrence. At time of visit I found 3 pens with a total number of ~30 pigs which were under treatment/supervision due to the same vice. As mentioned before - this specific batch has raised problems. All pens havily straw bedded - enviromental enrichment is compliant, medical attention and good practices as well compliant reason why at this moment no further action taken by APHA.SVI inspected all livestock on 25/08/2015. Well run business and at good standards applied. Business is focused mainly on breeding and providing gilts to different farms. a small proportion goes for growing and finishing on farm (~300 finishing pigs from a total of over ~2600).The in question batch has been indeed one with issues including signs of tail bite vice. [Name] is aware of the existing problems and the management appied includes isolation of individuals which show signs of this behaviour, treat infections if applicable	APHA-Animal Health Office informed
[Plant Name & Number]	11-08-2015	On farm welfare	Red Meat: Cattle	Welfare on farm	3	Poor animals/suspect emaciation	[ID Number] severely emaciated- rejected at AMI	TS-Trading Standards informed
[Plant Name & Number]	11-08-2015	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Weak animals	emaciated cow was barely waking	TS-Trading Standards informed

[Plant Name & Number]	05-01-2016	Lairage operation	Red Meat: Cattle	Procedures for protecting animal welfare	4	Other	Animal [ID Number], Limousin x, Female, DOB: 03/05/2014. The lorry with 44 animals arrived at the loading bay at 10:10. At 10:12 the lower level of the lorry began to be unloaded (23 animals). The lairage operative opened the gate to allow the animals go to pen 30 (which allows a maximum number of 30 animals). Getting out of the reception pen, once the animal turned it slip and fell on the floor (at 10:15) and then 2-3 animals went over it, resulting on getting the leg broken. The animal stood up and walked until pen 30 with the rest of the animals. Once there the animal laid down. For health and safety reasons for the operative who was going to shot the animal they emptied pen number 30, but this animal with the broken leg decided to stood up and walk away with the rest of the load. At 10.22 the animal fell down in the corridor, where it was not able to stood up again. At 10:27 the animal was shot (once) and bleed.	None Applicable
[Plant Name & Number]	06-01-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	4	Broken leg	OV witnessed unavoidable accidental incident after an animal jumped at unloading ramp and broke his leg. Immediate action taken by FBO. Emergency slaughter in lairage under OV supervision and carcass processed for HC	None Applicable

[Plant Name & Number]	26-04-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	Cattle [ID Number] found at evisceration to be in last stages of pregnancy. [Name] replied on 29/04/16 : "Pregnant cow [ID Number] I have phoned the farmer [Name] and reminded him it was an offence to present for transport and/or transport a pregnant female for whom 90% or more of the expected gestation has already passed. Farmer informed me when he picked the cow for slaughter and transported her to Dingwall he did not see any signs on the cow which would lead him to believe she was pregnant. Farmer has informed me he has kept back other cows he thought may be pregnant. Last week farmer called his vet out to a heifer which he kept back from slaughter. Cow had a seizure. Farmer currently gets his vet to pregnancy diagnose around 90 to 95% of all home bred heifers. Farmer also injects heifers and cows with an oestrogen injection to abort any possible pregnancies in female cattle intended for slaughter. Farmer runs young bulls on the farm and has told me he would take steps to ensure in the future they do not escape and catch the heifers. If you require any further information or assistance please do not hesitate to contact me."	TS-Trading Standards informed

[Plant Name & Number]	11-05-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	4	Injured animals	One bovine animal having the left hind leg caught on the gate of the trailer resulting in a bleeding wound.	TS-Trading Standards informed
[Plant Name & Number]	12-05-2016	Lairage operation	Red Meat: Pigs	Procedures for protecting animal welfare	4	Injured animals not dealt with promptly	AWO not taking specific measures to protect welfare needs of the animals as a pig was unloaded on 11.05.16 at 17:15 with a fracture on its hind leg and was no shot immediately on welfare grounds. I had to instruct them to shot and bled the animal on 12.05.2016 at 07:40 when observed at AMI. FBO argued that in CCTV footage the animal was putting weight on its leg. After my investigation of CCTV recording the animal had difficulties to get up in the unloading ramp, was not moving and in "dog sitting" position until the whole lorry was emptied. After this when moving could not bear weight on his hid leg at anytime, it was obvious that the welfare of the animal was being compromised. FSS notebook fulfilled and witnesses available, pictures and sealed leg frozen as evidence.	ENF Welfare Enforcement Notice

[Plant Name & Number]	12-05-2016	Welfare on transport	Red Meat: Pigs	Condition of the animals at unloading	4	Broken leg	A pig was identified to have a broken leg in the morning of 12.05.2016. As seen on CCTV footage available the animals were unloaded the day before (11.05.16) from 17.00. One of the animals from the slap mark [Name] had difficulties to get up in the unloading ramp, the pig was not moving and in "dog sitting" position until the whole lorry was emptied. After this when moving could not bear weight on his hid leg. The likeliness of a fracture was noticed at ante mortem when I arrived to the slaughterhouse and confirmed at PMI by the MHI team and myself. FBO was instructed to shot and bled the animal immediately.	TS-Trading Standards informed

[Plant Name & Number]	11-07-2016	Bleeding	Red Meat: Cattle	Stun to bleeding time	4	Stun to bleed time too long	Problems noted with the crane used to hoist cattle resulted in extended stun to bled animals for 3 animals, with kill number 28 showing signals of recovery and requiring double stunning	ENF written advice
[Plant Name & Number]	11-07-2016	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Other	This animal was delivered to the abattoir by [Name] at 12:21 and was observed to be in reasonable condition on arrival. [Name] completed an Additional Food Chain Information stating that "this cow had a cubicle injury to her right shoulder just above her right foreleg no treatment given. However later in the afternoon the animal was reported as looking unwell and in sternal recumbancy. At 06:30 when I was completing my early morning ante-mortem checks the animal was in lateral recumbancy and in obvious distress. The Animal Welfare Officer was informed and the animal was humanely slaughtered in the lairage and transferred to the cattle slaughter line. Photographs and videos of the animal were taken before slaughter. At post-mortem examination there was a soft tissue injury of the right foreleg as [Name] had described. However the animal had a long standing kidney infection and evidence of a recent bowel lesion resulting in a peritonitis which would be the likely cause of the animal becomming unwell in the lairage. The post mortem judgement will be that the carcass will not be fit for human consumption.	TS-Trading Standards informed
[Plant Name & Number]	12-07-2016	Captive bolt/concussion/free bullet	Red Meat: Cattle	Effectiveness	4	Multiple stuns	6shots given to the same animal	ENF written advice

[Plant Name & Number]	18-07-2016	On farm welfare	Poultry: Poultry	Welfare on farm	4	Other	there was one lot of spent hens with a very poor feather condition, lacking almost completely of feathers in the lower part of the body. In addition the Food Chain Information accompanying the birds reported a 14 pc mortality rate to date, which is definitely too high, and it was explained by cannibalism. Once called, the farmer said that the birds were pecking at each others in the earliest days because of large losses of feathers. The feet were fine though, no footpad dermatitis lesions. Referred to TS, which liaises with AH for cases that happen in the plant	TS-Trading Standards informed

[Plant Name & Number]	08-08-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	4	Broken leg	Animal transported with the hind right leg broken at the metatarsus level.	TS-Trading Standards informed
[Plant Name & Number]	09-08-2016	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Poor animals/suspect emaciation	I was informed by lairage staff that in pen 9 are 6 cattle in poor condition. Immediately I carried out the ante mortem inspection and I notice that the animals are in poor condition. - The bovine animal [ID Number] was in poor condition refuse to move and when she move was severe lame. On left front leg at knee level I notice an abscess and foot lesions on both legs, very big udder hard consistency and two wound on it. At post mortem inspection when the udder was cut a large quantity of pus was leaked on the carcass. Carcass was total rejected (254.4Kg). Front legs and udder detained for further investigation. -The bovine animal [ID Number] was emaciated/poor condition on the body was identified some wound marks, diarrhoea, dirty with faecal on the back legs. The animal was rejected at ante mortem inspection.	APHA-Animal Health Office informed
[Plant Name & Number]	09-08-2016	Welfare on transport	Red Meat: Sheep	Condition of the animals at unloading	4	Other	One sheep found DOA at unloading.	TS-Trading Standards informed
[Plant Name & Number]	09-08-2016	Captive bolt/concussion/free bullet	Red Meat: Cattle	Accuracy	4	Inaccurate stun	It was noted that the cattle with kill number 13 required 4 shots to be stunned, because the animal was too small for the stunning box and the head was loosely restrained by the head restraint, and the operative did not wait for it to calm down. The shots were completely out of the area supposed to be shot.	ENF written advice
[Plant Name & Number]	10-08-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	[ID Number], born on 27/06/2007, late pregnancy, 92 cm foetus length, all external organs well developed. Teeth erupted.	TS-Trading Standards informed

[Plant Name & Number]	16-08-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Injured animals	Animal with a considerable tumour. Transported with 4 more animals in the truck. Should be transported by itself	TS-Trading Standards informed

[Plant Name & Number]	17-08-2016	On farm welfare	Red Meat: Pigs	Welfare on farm	4	Other	Today at 09:10 while carrying out ante mortem inspection for the pigs belonging to the above mentioned farm my colleague [Name] identified 19 pigs with different degrees of tail biting, some of them showing open wounds and swollen tails, no additional FCI was presented stating these conditions. At post mortem inspection the referred carcasses were identified with severe tail bites in some cases and enlarged lymph nodes. One carcass was totally condemned due to presence of abscess near the spinal cord and throughout the lungs. As no further abscessation was found in other cases the affected areas were rejected. In my professional opinion pigs with evidence of swelling/abscesation in the base of the tail should not be presented for slaughter and only when a previously bitten tail has healed leaving no open wound or swelling it can be sent for slaughter once the withdrawal periods have been observed and accompanied by the relevant food chain information. Pictures were taken as evidence and some tails are kept secured in the freezer in case required.	APHA-Animal Health Office informed
[Plant Name & Number]	18-08-2016	On farm welfare	Red Meat: Cattle	Welfare on farm	3	Poor animals/suspect emaciation	A load of 8 animals arrived at [ID Number] for slaughter at around 11:40. During AMI some of them were identified in very poor condition scoring 1/5. The majority of them showed dullness with a deep cavity with no fatty tissue under the skin, the spine was extremely prominent and spinal processes sharp. As a result one of the animals was ante mortem rejected as unfit for human consumption due to suspect emaciation. Although at PMI the rest of animals were stamped as fit for HC, it was evident the low quality of the carcasses and the leanness of its tissues. In my opinion animals should meet the minimum standards when reared and be sent to slaughter in a suitable condition and the producers should monitor their cattle herds adjusting their nutritional needs to meet the changing needs throughout the year.	APHA-Animal Health Office informed
[Plant Name & Number]	18-08-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	4	Injured animals	During AMI it was identified an animal at unloading with extensive lumps through both flanks likely due to haematoma so FBO was instructed to kill him as soon as possible. At PMI the haematoma was confirmed with extensive bruising in both sides of the carcass, a final total trimming of 70 Kg was carried out afterwards. The animal was transported in the lorry within a load of 21 animals and another load of 8 cattle. There was a note from the farmer on the FCI pointing the haematoma along with another condition from another beast from the same batch. In this case and taking into account the severity of the injury in my opinion this animal should only have been transported under a vet supervision and declaration assessing its fitness and in any case should have been sent straight to slaughter in a single compartment with comfortable bedding as the farm is within a short distance from the abattoir.	TS-Trading Standards informed
[Plant Name & Number]	19-08-2016	On farm welfare	Red Meat: Sheep	Welfare on farm	4	Other	Old fracture in the right hind leg. The animal was holding the right hind leg and walking with difficulty. The most of the time resting on the floor.	APHA-Animal Health Office informed

[Plant Name & Number]	14-12-2016	On farm welfare	Red Meat: Sheep	Welfare on farm	4	Ingrown horn/s	Horn grown into and penetrating eye socket	APHA-Animal Health Office informed
[Plant Name & Number]	15-12-2016	On farm welfare	Red Meat: Cattle	Welfare on farm	3	Poor animals/suspect emaciation	On Thursday 15.12.16 at around 11:45. During AMI an animal was identified within a load of 20 animals in poor condition scoring 1/5. It presented a deep pelvic cavity with no fatty tissue under the skin, the spine was extremely prominent and spinal processes sharp, otherwise the animal seemed to be alert and aware of the surroundings not showing signs of severe distress. No additional information was provided on the FCI for this animal. Although at PMI the carcass was found fit for HC, it was evident the low quality of the carcass and the leanness of its tissues. In my opinion animals should meet a minimum standard when reared and be sent to slaughter in a suitable condition and the producers should monitor their cattle herds adjusting their nutritional needs to meet the changing needs throughout the year. Pictures were taken as evidence.	APHA-Animal Health Office informed
[Plant Name & Number]	15-12-2016	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	Fully developed calf at PMI. Foetus length c-r 104 cm, coronary band 18 cm	TS-Trading Standards informed

[Plant Name & Number]	06-01-2017	Welfare on transport	Red Meat: Sheep	Condition of the animals at unloading	4	Broken leg	One sheep shoot at unloading due to broken leg	TS-Trading Standards informed
[Plant Name & Number]	06-01-2017	Post-mortem findings	Red Meat: Cattle	Post-mortem findings	3	Other	One calf found at post mortem inspection. kill no 17.	APHA-Animal Health Office informed
[Plant Name & Number]	10-01-2017	Welfare on transport	Red Meat: Sheep	Condition of the animals at unloading	4	Broken leg	One sheep supplied by [Name & ID Number] came with right foot front and rear left leg broken.	APHA-Animal Health Office informed
[Plant Name & Number]	11-01-2017	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Wounds	One animal [ID Number] showed several wounds along the spine and on hip. The animal was supplied by [Name & ID Number] and transported by [Name]. The wounds measured approximately 12x5cm (thoraco-lumbar spine), 10x4cm (sacral area), 2x2 and 2x3cm on tail head and 6x4cm on hip. The wounds were dry with dark centre and red rim, the surrounding tissue was hairless and swollen. Hair adjacent to the wounds showed grey discolouration. At PMI slight bruising was noted in the wound area.	TS-Trading Standards informed
[Plant Name & Number]	11-01-2017	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	One animal discovered in late term pregnancy at PMI. Animal supplied and transported by [Name & ID Number]. Fully formed female calf, Crown-Rump-Length 79cm, teeth erupting, eyelashes and full hair coat, golden slippers on feet	TS-Trading Standards informed
[Plant Name & Number]	12-01-2017	Welfare on transport	Red Meat: Sheep	Condition of the animals at unloading	4	Other	2 DOA found yesterday during the unloading on the transport	APHA-Animal Health Office informed
[Plant Name & Number]	12-01-2017	On farm welfare	Red Meat: Cattle	Welfare on farm	3	Other	left hind leg lame	APHA-Animal Health Office informed
[Plant Name & Number]	12-01-2017	Welfare on transport	Red Meat: Pigs	Condition of the animals at unloading	4	Broken leg	Animal at unload with broken leg. Adequate vehicle and good practices at unloading. Shot in lairage.	None Applicable
[Plant Name & Number]	12-01-2017	Lairage operation	Red Meat: Cattle	Procedures for protecting animal welfare	3	Horned cattle not separated	2 horned bovine animals not separated in the lairage from the unhorned animals.	ENF verbal advice
[Plant Name & Number]	12-01-2017	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	Cattle potentially on the last 10% of the pregnancy	TS-Trading Standards informed
[Plant Name & Number]	12-01-2017	Lairage design and maintenance	Red Meat: Cattle	Protection from adverse weather conditions	3	Animals not protected from adverse weather conditions	One of the corrugated panels from the roof has come off. The incident might be due to the strong winds and heavy snow we are experiencing. No animal suffering involved but it could pose a potential accident for animals or Humans and rain can percolate through	ENF verbal advice

[Plant Name & Number]	13-01-2017	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Wounds	At antemortem inspection was identified a bovine animal [ID Number & Address] with severe lame (right front leg). Close inspection revealed an old trauma caused possible by a cable. At postmortem inspection was identified a cut 360° above hoof caused possible by a cable with necrotic tissues , inflammatory process, bad smell, deep 2cm. In my professional opinion the animal has suffered. The animal belonged to a load of 15 animals and another two animals was lame. This leg it is detained for further investigation with seal no [Number]. Pictures/video have been taken as evidence.	APHA-Animal Health Office informed
[Plant Name & Number]	13-01-2017	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Other	3 cows with septic arthritic lesions	APHA-Animal Health Office informed
[Plant Name & Number]	16-01-2017	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Wounds	The post - mortem examination revealed that this heifer had severe haemorrhagic lesion combined with an extensive inflammatory lesions with fibrotic tissue attached	APHA-Animal Health Office informed
[Plant Name & Number]	17-01-2017	Welfare on transport	Red Meat: Sheep	Condition of the animals at unloading	4	Injured animals	One sheep shoot at arrival during the night , due to broken zygomatic arch bone. Recent fracture.	TS-Trading Standards informed

[Plant Name & Number]	17-01-2017	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	Pregnant in the last part of the pregnancy. The calf was mature, all incisor have erupted, long eyelash, almost 80cm, the hoofs almost completely hard and full coat.	APHA-Animal Health Office informed
[Plant Name & Number]	17-01-2017	Welfare on transport	Red Meat: Cattle	Condition of the animals at unloading	3	Last stages of pregnancy	During PMI fully grown calf discovered. CRL 92 cm, "golden slippers", 2 incisors erupted, eye lashes. Estimated 282 days of pregnancy.	TS-Trading Standards informed
[Plant Name & Number]	18-01-2017	On farm welfare	Red Meat: Cattle	Welfare on farm	4	Bruised	At around 06:20 during AMI an animal was identified with an extensive swollen abdominal cavity and increased respiration rate. This animal was isolated and killed ASAP. At post mortem inspection it was noted an extensive bruising throughout the carcass with a high quantity of serosanguineous exudate, in my opinion its colour and appearance indicates that this as an old untreated bruising. The beast was transported in a lorry with a total of 52 animals. No information was provided on the FCI accompanying this animal for slaughter. Pictures and 3x trimmed tissue samples from different parts of the carcass detained with seal No [Number] taken as evidence.	APHA-Animal Health Office informed
[Plant Name & Number]	18-01-2017	Lairage operation	Red Meat: Cattle	Animal welfare officer's checks and actions	3	Other	Welfare monitoring records not up to date	ENF written advice
[Plant Name & Number]	18-01-2017	Stunning / killing	Red Meat: Cattle	Effectiveness	3	Multiple stuns	Excessive number of bovine animals with multiple stunning recorded at post-mortem checks by FSS staff.
